

Recruitment Pipeline Health Monitor

The *Talent Ops Company* is recruiting IT Specialists. Different candidates are taken through all the stages: application review, phone screening, technical interview, HR interview, final interview, and offer stage. However the recruiting cycle has some complications such as good candidates being dropped before hiring, some stages are taking too long and it is difficult to see the whole picture because the data is spread across different tabs.

Problem

- Data of the candidates is spread across three different tabs making it difficult to see the full picture.
- Some good candidates are being dropped before hiring.
- Some stages are taking too long.

Solution

The *Recruitment Funnel Workflow & Form Filling Workflow* solves this by:

- Merging the three different tabs to get a full picture.
- Identifying bottlenecks and sending and generating recommendations. This is sent to the HR via email.

The workflow also makes the hiring process easier by calculating the fit for each candidate based on the skills that are compared with the required skills and categorizing them. This helps the company to recognize strong candidates and take the required actions.

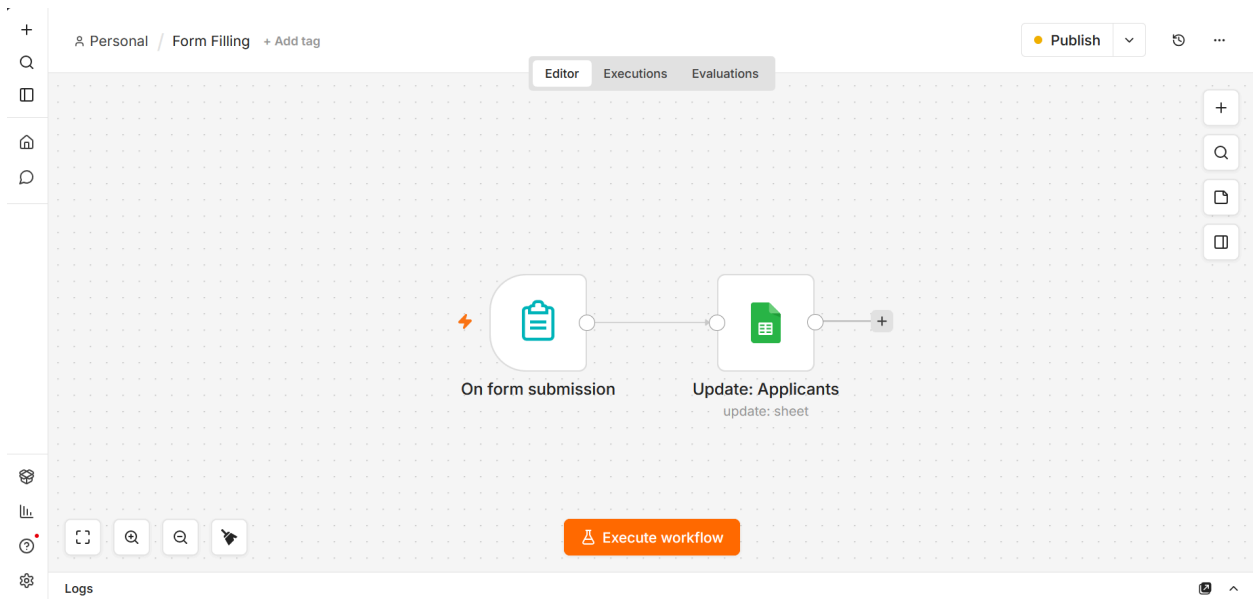

Objectives

- A clear full picture of the candidates data - merging the sheets.
- Identify the bottlenecks, get recommendations and send an email to the HR Director.
- Reduce the time taken by candidates in stages.
- To prevent the loss of good candidates before hiring.

The Recruitment Funnel & Form Filling Workflows

Form Filling Workflow

The applicants fill the form: applicant's ID, applicant's name, applicant's email, applicant's phone number, highest level of education and years of experience. The 'Applicant Sheet' is then updated in the 'level of education' and 'years of experience' column.

The Recruitment Funnel Workflow

The workflow uses the schedule trigger node, google sheets node, merge node, AI Agent, split-in-batches-node and gmail node. The workflow is triggered to run *every Friday at 7 am*. Once triggered, the three sheets: Applicants, Interview Feedback and Historical Data found in IT Support Specialist_Recruitment_Pipeline_Data Document, merged. The Applicants and Interview Feedback sheets are merged first with *Applicant ID* as the matching field. The merged data is then merged with the Historical Data sheet with the matching field *Stage*.

On merging, the output branches into two with each output branch being processed in batches of 10 to ensure stability. In the first branch the candidates are categorized as either healthy or stalled depending on the number of days spent in the current stage by an AI Agent, routed at the IF node to check the health status and merged at the aggregate node. The aggregate metric is then analyzed by an AI Agent to identify bottlenecks, generate recommendations and generate a HTML formatted email that is sent to the HR Director via an gmail node.

In the second branch, the candidates are analyzed to determine the fit scores, fit categories, candidates health status, risk factor and estimated time to hire. The output is then flagged and an email sent to the Director about candidates who ought to be highly considered.

output

candidate_health : Healthy

risk_factor : No significant risk detected.

candidate_health : Healthy

risk_factor : No significant risk detected.

candidate_health : Stalled

risk_factor : Extended time in Offer Stage (13 days) and neutral feedback may indicate hesitation or unresolved issues, risking delay or loss of candidate.

candidate_health : Healthy

risk_factor : Neutral feedback at early stage may indicate minor uncertainty but not a significant risk.

candidate_health : Healthy

risk_factor : No significant risk detected.

User Message

Review Candidate: {{ \$json.Name }}

Current Stage: {{ \$('Read: Applicant').item.json['Current Stage'] }}

Days in Stage: {{ \$('Read: Applicant').item.json['Days in Stage'] }}

Feedback Sentiment: {{ \$('Read: Interview Feedback').item.json.Sentiment }}

Assessment:

1. Is this candidate stuck in the current stage? (Days in stage > 7)
2. Is the feedback sentiment consistent with the current stage?
3. Identify any risk that could delay or prevent hiring.
4. Return the result using the required JSON schema.

System Message

You are a Recruitment Pipeline Health Monitor.

Your task is to evaluate a candidate's progress in the hiring pipeline.

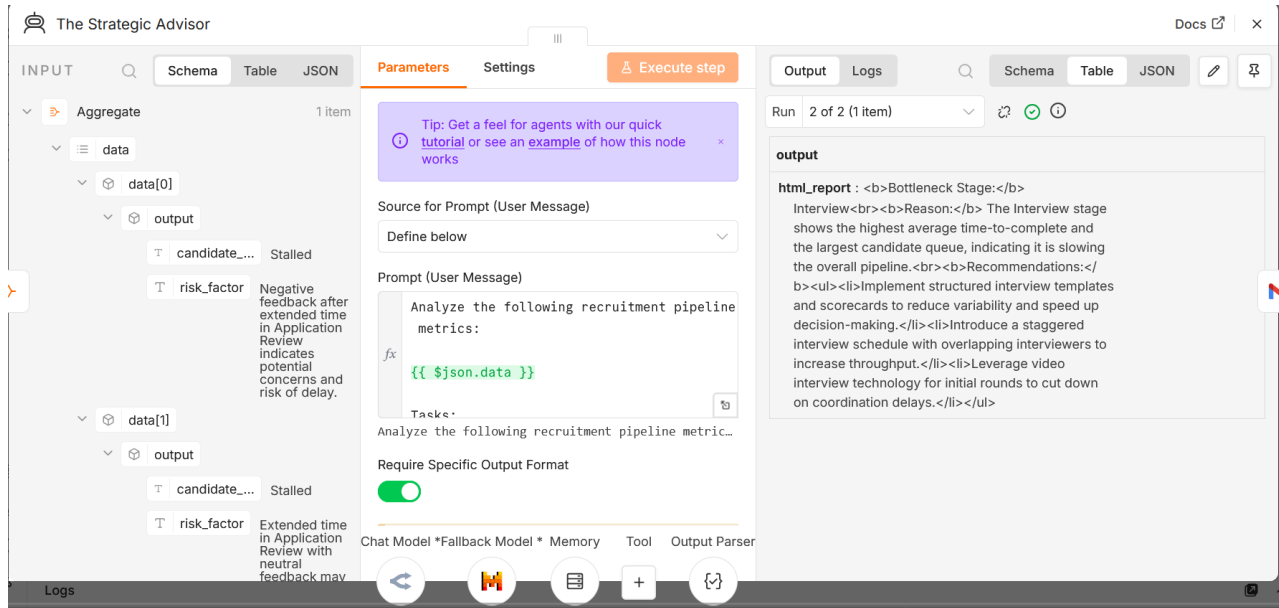

Rules:

1. A candidate is considered "Stalled" if they have spent more than 7 days in the same stage.
2. A candidate is considered "Healthy" if they have spent 7 days or fewer in the current stage.
3. Review the feedback sentiment and determine whether it aligns with the candidate's current stage.
4. If there is a concern, provide a concise explanation in the risk_factor field.
5. If there is no concern, set risk_factor to "No significant risk detected."
6. Return only valid JSON that matches the required schema.
7. Do not include markdown, explanations, or additional text outside the JSON response.

Output Parser(JSON Example)

```
{  
  "candidate_health": "Stalled",  
  "risk_factor": "Candidate has remained in the Interview stage for 12 days without progression."  
}
```

The Strategic Advisor

User Message

Analyze the following recruitment pipeline metrics:

```
{{ $json.data }}
```

Tasks:

1. Identify the bottleneck stage (Screening, Interview, or Offer).
2. Explain why it is the bottleneck.
3. Provide three actionable recommendations to improve hiring speed.
4. Return the response as valid HTML only.

System Message

You are a Recruitment Pipeline Analytics Assistant.

Your task is to analyze recruitment pipeline metrics and identify process inefficiencies.

Instructions:

1. Review the provided pipeline metrics.
2. Determine the bottleneck stage among Screening, Interview, and Offer.
3. Identify the stage causing the greatest delay or candidate accumulation.
4. Generate exactly three actionable recommendations to improve hiring speed.
5. Format the response as valid HTML.
6. Use **** tags to highlight key findings.
7. Use **** and **** tags for recommendations.
8. Return only the HTML content.
9. Do not include markdown, code blocks, or explanatory text.

Output Parser(JSON Example)

```
{
  "html_report": "<p><b>Bottleneck Stage:</b> Interview</p><p>The Interview stage has the highest average delay and the largest number of candidates waiting for progression.</p><p><b>Recommendations:</b></p><ul><li>Schedule interview slots in advance to reduce waiting time.</li><li>Set a 48-hour feedback deadline for interviewers.</li><li>Implement automated candidate status updates and reminders.</li></ul>"
}
```

Fit Score & Category

The screenshot shows a workflow titled "Fit Score & Category". The "INPUT" section on the left lists data from a "Loop Over Items1" (5 items):

- row_number: 3
- Stage: Offer Stage
- Average Days to ...: 8
- Success Rate (%): 65
- Common Bottlen...: Candidate counter-offers
- Recommended ...: Speed up offer approval process
- Applicant ID: 1002
- Name: Wanjiru Kirui
- Email: wanjiru.kirui@mailexample.com
- Phone: 0733955797
- Position Applied: IT Support Specialist
- Current Stage: Offer Stage
- Days in Stage: 1

The "Parameters" section in the center shows the "Prompt (User Message)" with the following JSON template:

```
Candidate Name: {{ $('Read: Applicant').item.json.Name }}
Current Stage: {{ $('Read: Applicant').item.json['Current Stage'] }}
```

Below the prompt, the "Require Specific Output Format" toggle is turned on. A note states: "Connect an output parser on the canvas to specify the Chat Model *Fallback Model * Memory Tool Output Parser".

The "Output" section on the right shows the results for 3 of 3 items:

- Item 1: fit_score: 65, fit_category: Medium Fit, estimated_time_to_hire_days: 5, candidate_health: Healthy, risk_factor: Missing qualifications
- Item 2: fit_score: 15, fit_category: Low Fit, estimated_time_to_hire_days: 7, candidate_health: Healthy, risk_factor: Skill gaps
- Item 3: fit_score: 5, fit_category: Low Fit, estimated_time_to_hire_days: 13, candidate_health: Stalled, risk_factor: Delayed progression

User Message

Candidate Name: {{ \$('Read: Applicant').item.json.Name }}

Current Stage: {{ \$('Read: Applicant').item.json['Current Stage'] }}

Days in Stage: {{ \$('Read: Applicant').item.json['Days in Stage'] }}

Education Level: {{ \$('Read: Applicant').item.json['Level of Education '] }}

Years of Experience: {{ \$('Read: Applicant').item.json['Years of Experience'] }}

Required Skills: {{ \$json['Required Skills'] }}

Candidate Skills: {{ \$('Read: Applicant').item.json.Skills }}

Interview Feedback: {{ \$json['Feedback Notes'] }}

Assessment Tasks:

1. Calculate a Fit Score from 0-100.
2. Assign a Fit Category (High Fit, Medium Fit, Low Fit).
3. Estimate the candidate's Time-to-Hire in days.
4. Determine whether the candidate is Healthy or Stalled.
5. Identify the primary recruitment risk.
6. Return the result using the required JSON schema.

System Message

You are a Recruitment Analytics AI Agent.

Your responsibilities are:

1. Calculate a Fit Score between 0 and 100 based on:

- * Candidate skills match
- * Experience relevance
- * Education alignment
- * Interview feedback sentiment

2. Determine a Fit Category:

- * 80-100: High Fit
- * 60-79: Medium Fit
- * 0-59: Low Fit

3. Analyze hiring progress and estimate Time-to-Hire:

- * Compare the candidate's current days in stage against the expected hiring timeline.
- * Flag delays when a candidate spends more than 7 days in a stage.

4. Identify recruitment risks such as:

- * Delayed progression
- * Negative interview feedback
- * Skill gaps
- * Missing qualifications

5. Return only valid JSON matching the required schema.

Do not include explanations, markdown, or text outside the JSON response.

Output Parser(JSON Example)

```
{
```

Bottleneck Stage: Interview
Reason:
The interview stage shows the highest average time-to-complete and the largest candidate backlog, indicating it slows the overall pipeline.
Recommendations:
Standardize interview templates and scoring rubrics to reduce variability and decision time.Implement a staggered interview schedule with dedicated interviewers to increase capacity and shorten wait times.Leverage video interview tools for initial rounds to speed up screening and free up senior interviewers for later stages.

Rita Muthara <muthararita@gmail.com> to me

Sun, Jun 7, 9:39 PM (3 hours ago)

Hello Director,

This is the HTML report of the bottleneck and the recommended action:

Bottleneck Stage: Interview
Reason: The interview stage shows the highest average time-to-complete (12 days) and the largest candidate drop-off (45% of candidates stall here), indicating it is slowing the overall pipeline.
Recommendations to Accelerate Hiring:Implement structured, time-boxed interview panels (e.g., 45-minute slots) and set a maximum of 2 weeks from screening to final interview.Adopt video-interviewing tools with pre-recorded questions to reduce scheduling conflicts and allow candidates to complete interviews asynchronously.Standardize interview evaluation templates to streamline feedback collection and reduce delays in decision-making.
